

Cirrus SR22 G5 Model Guide

The Cirrus SR22 G5 is a single-engine piston aircraft listed in the library as produced from 2013 to 2017, with seating for 4 to 5. The registry data covers the whole SR22 family, and the only handbook supplied is for the SR22T. This guide therefore gives no variant-specific limits or weights for the Cirrus SR22 G5. Confirm those from its own documents.

KEY TAKEAWAYS

- Production years 2013 to 2017; single-engine piston; seats 4 minimum and 5 maximum per the library record.
- SR22 family registry maxima: cruise up to 180 kt, range up to 700 nm, service ceiling up to 17500 ft. These are not G5-specific.
- Family maximum takeoff weight is up to 1500 kg with up to 4 passengers. Confirm the G5's own certified weights in its POH.
- No G5 specs were supplied. Do not apply SR22T handbook numbers to this airplane.

WHAT THE DATA COVERS

The library record gives only the basics for the Cirrus SR22 G5: piston engine, single-engine piston category, 2013 to 2017, 4 to 5 seats. Registry figures describe the SR22 family as a whole and are 'up to' maxima, not G5 specifications. The supplied handbook is for the SR22T, a different variant.

WHAT TO CHECK BEFORE BUYING

Get the POH for the exact G5 serial number and check it is current. The Cirrus handbook says the owner must keep it current, including temporary and numbered revisions. Check the Log of Supplements against the installed optional equipment. Any non-Cirrus STC or modification should have its supplement recorded.

SAFETY NOTES

- Confirm the handbook is the G5 edition. The SR22T handbook supplied is for a turbocharged variant with its own limits.
- Check that supplements for installed optional equipment are in the airplane and listed in the Log of Supplements.
