AGUSTA A109C Model Guide

AGUSTA A109C is a helicopter variant in the Agusta A109 family, alongside the A109, A109A, A109A II, A109E, A109K2 and A109S. The inputs contain no variant-specific specifications for the AGUSTA A109C, so this guide gives family-level context only and lists what to verify before buying.

KEY TAKEAWAYS

- No verified AGUSTA A109C specs, weights or V-speeds were available. Get them from the aircraft's own documentation.
- Family maxima: up to 8 passengers, 126 kt cruise, 360 nm range, 20000 ft service ceiling, 2800 kg MTOW.
- Records conflict on powerplant: the library row says piston, the family registry says turboshaft. Confirm the engine on the actual aircraft.
- The only document found is a reference-only listing for an A109E manual. It is not an A109C maintenance source.

WHAT THE DATA COVERS

The registry describes the whole A109 family, and each maximum is the highest across all variants. It is not an AGUSTA A109C figure. The library entry for this model has no years, seat counts, specs or performance data.

WHAT TO VERIFY BEFORE BUYING

Confirm the engine type, because the records disagree. Get the actual maintenance manual and records for the A109C, not the A109E listing found here. Establish the real weights, seating and performance of this exact airframe from its own documents.

SAFETY NOTES

- The manual listing says it is sold for historical and reference use only, not for current certification or repair.
- Do not treat family maxima (cruise, range, ceiling, weight) as AGUSTA A109C limits.
